

Anderton
CONCRETE PRODUCTS LTD

• RETAINING WALL SOLUTIONS • FENCING & BUILDING PRODUCTS • RAILWAY PRODUCTS

Welcome

Anderton Concrete Products has its roots deeply set in traditions, manufacturing excellence and dedication to customer service that have existed for many years.

The company has been manufacturing precast concrete products for over 50 years and as such, the name Anderton Concrete Products, has become synonymous with product quality and deliverability.

Anderton Concrete Products Ltd is a market leading manufacturer of concrete rail products, fencing materials and retaining wall systems with an unrivalled reputation for quality, design and innovation. The company supplies a vast range of sustainable precast products to every sector of the construction industry; fully supported by our experienced sales & technical team, we have built long-term partnerships with our customers and suppliers including major contractors, the rail industry, the Ministry of Defence and national merchant distributors.

CONCRETE PRODUCTS

- **Concrete Retaining Wall Systems** including: Keystone / Stepoc / Slope-loc
- **Concrete Fencing & Building Products** including: Litecast / Slotted Fence Posts & Gravel Boards / Wall Copings / Pier Caps / Lintels & Padstones / Inspection Chambers
- **Concrete Railway Products** including: Cable Troughs / Apparatus Case Bases
- **Miscellaneous Pre-cast** including: Bespoke Products / Cable Protection & Identification / Utility Ducting

HEALTH & SAFETY POLICY

ANDERTON CONCRETE PRODUCTS LTD seeks to achieve industry best practice standards of health and safety. We recognise that this is a critical issue for all of our stakeholders, particularly for our employees and contractors.

Our health and safety policy, applied throughout the company, is to:

- Comply, at a minimum, with all applicable legislation and continually improve our health and safety stewardship towards industry best practice
- Ensure that our employees and contractors respect the Company's health and safety imperatives
- Ensure that our company provides a healthy and safe workplace for our employees and contractors, and take due care of all customers and visitors at our locations
- Require all our company employees and contractors to work in a safe manner as mandated by law and industry best practice.

Health and Safety Management

Health and Safety Management is a daily priority of line management. Safety results for the company are closely monitored by senior management and are reported to the Anderton Concrete Products Ltd Board on a monthly basis.

Line management is responsible for ensuring that company health and safety policies are fully adhered to, and that site managers and employees, supported by company safety officers, are trained in health and safety risk analysis and prevention.

Where accidents occur they are thoroughly investigated and corrective action is taken to avoid a recurrence. Lessons learned are actively shared via Safety Best Practice groups.

Safety Performance

We have found that the most common causes of accidents are slips, trips and falls, injury by falling and moving objects and improper manual handling; with additional care and attention by all, many of these accidents are preventable.

Our goal is zero fatalities and zero accidents. Due to the nature and size of our business, these are extremely challenging goals. We will continue to devote substantial management and employee time and all the appropriate resources to this area to progress company performance towards those targets.

Product Safety

The products delivered by Anderton Concrete Products Ltd, when properly used, present negligible health risks. Material Safety Data Sheets advising on optimal application procedures are available on request.

ENVIRONMENTAL POLICY

ANDERTON CONCRETE PRODUCTS LTD operates in an environmentally responsible manner. The resources and processes that we have put in place are focused on achieving industry best practice standards at all of our locations.

Our environmental policy, applied throughout the company, is to:

- Comply, at a minimum, with all applicable environmental legislation and continually improve our environmental stewardship towards industry best practice
- Ensure that our employees and contractors respect their environmental responsibilities
- Proactively address the challenges of climate change
- Optimise our use of energy and resources through efficiency gains and recycling
- Promote environmentally-driven product innovation and new business opportunities
- Be good neighbours in the many communities in which we operate.

Environmental Management

Achieving our environmental policy objectives at all our locations is a management imperative; this responsibility continues right up to the Anderton Concrete Products Ltd Board level.

Daily responsibility for ensuring that the Company's environmental policy is effectively implemented lies with individual location managers.

These personnel are charged with ensuring that company environmental policies are properly adhered to, and that site managers are fully aware of their responsibilities in this regard.

Environmental Performance

Anderton Concrete Products Ltd is committed to investing in a wide range of environmental improvements across all of our activities and areas of operation. Plant upgrades typically include process yield optimisation, increased recycling, better energy efficiency, abatement of emissions, together with improvements in ergonomics and safety. This sustained investment program steadily moves us towards best industry practice in all those areas.

Environmentally-driven Product Innovation

In tandem with our commitment to act as a socially responsible corporate citizen, the company views the development of products that specifically benefit the environment as a significant business opportunity. Consequently this area is a key driver in our sales and marketing strategies, and forms a key part of Best Practice exchanges between our operating companies. Significant environmental and commercial benefits are also gained through recycling of used materials.

Climate Change

We acknowledge the challenges that climate change presents to humanity and to our businesses and we are committed to playing our part in developing pragmatic solutions. In all our activities, increasing energy efficiency and reducing CO2 emissions remains a major focus. We see climate change and high energy costs as twin innovative driving forces of the future and we recognise that the challenges of today can quickly become the opportunities of tomorrow. In addition, many of our core products can contribute to climate change mitigation and adaptation. On the broad environmental front we continue, through ongoing systematic plant upgrading, to make progress in increasing energy efficiency, reducing waste, optimising water usage and recycling more secondary materials and fuels. We believe all of these initiatives are not only environmentally-positive but also business-positive.

QUALITY & MISSION STATEMENT

QUALITY

The aims and objectives of the Quality System are:

- Reduce production costs by minimising defective elements, remedial work, and wasted materials
- To breed a culture of pride and confidence in our workmanship
- To assure our customers of a consistent and first class product

Standards of performance are not restrictive to the saleable product, but extend to all of our activities throughout the business.

The policy has the wholehearted support of the Directors and Management of Anderton Concrete Products Ltd.

MISSION STATEMENT

- Exceeding customer expectations by always being first to market with the best products.
- Partnering with our customers to make sure they succeed.
- Demanding that everything we do leads to a cleaner, healthier, safer environment.
- To promote good safe working practices within our industry.
- To raise the profile of concrete product manufacturing as a skilled industry.
- To liaise with the Health & Safety Executive and other bodies, including suppliers.
- Committed to ensuring customer satisfaction by continually improving performance in the development of products, quality, technique and service.
- To satisfy this commitment all employees must understand the importance and responsibilities of quality in their work, and utilise only those approved working practices which will assure the required quality standards are achieved.

Committed to ensuring customer satisfaction by continually improving performance in the development of products, quality, technique and service.

Accredited to BSI QMS

CPR & CE MARKING

Key Facts:

- From 1st July 2013 it became mandatory for any construction product, covered by a harmonised European Standard (hEN) containing a 'ZA' annexe, to carry a Declaration of Performance (DoP) and a CE mark.
- Products not covered by hENs but with a European Technical Approval (ETA) may be CE marked.
- Products not falling under the scope of a hEN or ETA must not carry a CE mark. However most construction products will eventually have a harmonised European Standard.
- CE marking is not a 'quality' standard, it simply confirms that a product has been manufactured to a performance standard that defines the characteristics of the product.

Anderton products covered by a harmonised European Standard and therefore requiring a CE mark are:

- Closure Blocks (EN 15037-2)
- Lintels (EN 845-2)
- Keystone (EN 771-3)
- Slope-loc (EN 771-3)
- Slips & Coursings (EN 771-3)
- Stepoc (EN 15435)
- Standard & BS Fencing Posts and Gravel Boards (EN 12839)
- DIC/IC (EN 1917)
- Path Edging (EN 1340)

In order to apply a CE mark to a product it is necessary to have in place a Declaration of Performance (DoP) and these can be accessed for the relevant products at our website location: www.anderton-ce.co.uk

A photograph of a retaining wall and bridge structure. The retaining wall is made of grey concrete blocks and has a metal railing on top. Above the wall is a concrete bridge with a metal railing. The background shows a river and some trees. The image is overlaid with large orange geometric shapes. A large white number '2' is in the top right corner.

2

RETAINING WALL SOLUTIONS

OVERVIEW - RETAINING WALLS

There are more occasions in the construction market today where there is limited ground for development, and a retaining wall may be specified to extend the area of level ground available for building. Alternatively, walls may be simply required to create terraces and attractive landscaping, particularly on the more prestigious developments. Anderton Concrete offers a whole range of retaining wall and soil reinforcement solutions to cater for these requirements.

Stepoc - Manufactured to harmonised standard EN 15435

THE REAL ALTERNATIVE TO SHUTTERED CONCRETE

A system of concrete shuttering blocks that are highly-engineered and dimensionally co-ordinated. Stepoc is designed to readily accept vertical and horizontal reinforcement for use where structural performance is the prime consideration and offering cost savings on both time and labour.

Keystone - Manufactured to harmonised standard EN 771-3

REPLACES GABION, CRIB AND CAST-IN-SITU WALLS

The number one retaining wall system on the market today; available in a range of finishes and colours providing practical solutions for low-level gravity walls through to tall structural walls in both the domestic and commercial markets.

Slope-Loc - Manufactured to harmonised standard EN 771-3

A STYLISH MODULAR HARD FACING TO SOIL SLOPES

Slope-Loc provides either a simple solution for low level gravity walls in the domestic DIY sector or an engineered solution for taller walls where an alternative to vertical walls is preferred.

STEPOC

THE REAL ALTERNATIVE TO SHUTTERED CONCRETE.

Stepoc's unique design enables reinforcement to be positioned in order to maximise the engineer's design.

Stepoc is filled with concrete, which is pumped down through the inter-connected cavities in the blocks. The blocks' unique design creates a cascade or waterfall effect which ensures a smooth filling of the pumped concrete, forcing out air and eliminating segregation, to create walls which have immense compressive and lateral strength. Stepoc walls have achieved the highest rating for a Security Barrier System under the SEAP (Security Equipment Assessment Panel) testing regime.

Stepoc enables the fast construction of single skin retaining walls up to 4.0 metres high, subject to a design carried out by a structural engineer. Stepoc can be filled in a single pour from 1.8 - 2.25m depending on block thickness. Stepoc is available in three widths, 200, 256 & 325mm and at less than 20kg per unit.

Stepoc is proven in use on applications the length and breadth of the UK and has the backing of an experienced team with a wealth of knowledge in the construction industry. Stepoc combines the ease of blockwork construction with the versatility of in-situ concrete, and yet is faster to apply than both, making it an ideal component for :

- Retaining walls
- Basement walls
- Flood Alleviation Schemes
- Swimming pools
- Laterally-loaded panels
- Blast panels
- Lift shafts
- Platform edges

L4

- L2 - Full Length Standard
- L3 - Full Length Plain End
- L4 - Half Length Plain End

Flood Relief Scheme, Chelmer Village

Brick Clad STEPOC

Pour Heights

There is a maximum height for each pour so that stability is not lost in the dry laid blocks as they are filled. Lower heights for each pour can also be used. The maximum heights are:

200 Stepoc - 8 Courses	= 1.80m
256 Stepoc - 10 Courses	= 2.25m
325 Stepoc - 10 Courses	= 2.25m

If multiple concrete pours are required, the concrete of the previous pour should finish 50-75mm from the top of the course of Stepoc, with the vertical bars projecting the equivalent of a splice, length taken from the engineer's schedule. This is to ensure a proper key between consecutive pours.

Concrete Mix

The concrete should possess the characteristic strength specified by the structural engineer who has carried out the design of the wall, but not less than 35N/mm²

Block type	Concrete Infill
200mm	0.12m ³ per m ²
256mm	0.15m ³ per m ²
325mm	0.19m ³ per m ²

The concrete should be designed to be suitable for the specific means of delivery, possessing a slump of no less than 150mm. The maximum aggregate size should not exceed 10mm and the mix should contain no less than 300kg of cement per cubic metre of fresh concrete.

Filling is best accomplished by a concrete pump or skip with a 75mm nozzle, and the design of the concrete should take this into account. Mechanical vibration must not be used. The use of water reducing agents is acceptable to lower cement content in the mix design.

Anderton
CONCRETE PRODUCTS LTD

KEYSTONE

Seafront, Southend-on-Sea

Keystone is a system of modular retaining wall units that are manufactured from high strength, durable concrete which are laid dry and can be used in conjunction with a geogrid to provide tall walls or to accommodate high surcharges.

Alternatively, it can be used with or without a concrete backing to create a gravity wall.

Keystone uses a unique high strength fixing system which securely locks the component parts in place. At the centre of the system is the patented blue comb connector that provides exceptionally high connection strengths.

Keystone block showing grid connection

A combination of Keystone modular units, positive pin connections and soil reinforcing geogrids delivers 'rock solid' stability and performance – its enhanced connection between grid and block is critical to ensure economic designs.

DESIGN

Keystone is available on a design and supply basis. Our engineers have a wealth of knowledge and expertise in the field of Geotechnology. Wherever possible we aim to work with clients from the outset, in order to offer them the most cost-effective design solutions possible.

This system has the British Board of Agrément approval. This Certificate contains all respective design and construction information.

Passenger access, Littleborough Station, Rochdale

APPLICATIONS

Keystone's ability to connect positively with proprietary geogrid systems has enabled it to be built to heights of over 15 metres worldwide – making it ideal for roadside and bridge locations and its simple, dry build construction enables it to handle the most challenging site design.

KEYSTONE'S VERSATILITY IS IDEAL FOR:

- Retaining Walls
- Embankments
- Culverts
- Bridge Abutments
- Tunnel Entrances
- Access Ramps
- River Diversions / Flood Alleviation Schemes

AESTHETIC IMPACT

Keystone provides design flexibility to meet the unique challenges of modern commercial development projects; whether you are building tall retaining walls, short walls, using curves or corners, considering rapid changes in elevation detail or using Keystone with other specialist materials. This proven system enhances the architectural importance of any structure whether new-build or refurbishment.

A Keystone retaining wall offers a positive solution to the most challenging and demanding design and construction requirements.

This inner strength is complemented by the aesthetic impact of a system capable of combining classic lines, graceful curves, shadows and textures.

KEYSTONE

Keystone Compac vertical wall with concrete backing & 100mm Capping

Keystone Compac with grid system retaining wall

EASY TO INSTALL

- **Interlocked, mortar-free assembly**
No mortar required, thus allowing free flow drainage through the wall, releasing hydrostatic loads.
- **Patented fibreglass pin system**
These ensure a proper alignment, unit interlock and the ability to create convex or concave curves.
- **Rapid installation**
A walling system that allows for faster construction – no mortar; simple foundations and straight-forward build.

ANCILLARY COMPONENTS

A choice of ancillary components are available to add the 'finishing touches' to walls and to solve on-site engineering problems.

DESIGN SERVICE

We have many years of experience developing our Keystone products and are able to offer exceptional levels of design and service support. We have an experienced technical support team and a very comprehensive design support programme to assist you with your individual requirements.

Creating gravity or unreinforced walls up to 2m high

Keystone can be used to create gravity or unreinforced wall up to 2m in height. For most applications, no structural foundation is required and a simple levelling pad will suffice. Even in the case of unreinforced soil walls – only the base course of facing units require bedding on mortar.

Creating reinforced soil walls

For taller and more critical walls, Keystone units are combined with soil reinforcement options to create larger composite structures. With this properly designed combination, the reinforced soil mass can support greater earth pressure and surcharge loads; and the pin/comb fixing concept allows geogrid material to be fully incorporated into the structure of the wall providing an exceptionally strong 'mechanical' link.

Split Face

Smooth Face

East London Line railway.

Anderton
CONCRETE PRODUCTS LTD

KEYSTONE

The Keystone system comprises of four units – **Compac, Corners, Caps and Slips.**

These units provide the ability to vary height and the opportunity to further explore the variations created by light and shadow by introducing band courses.

COMPAC

Keystone Compac is the perfect choice for either gravity or reinforced walls. It is available with a split or smooth finish.

Weight 39.5kg

Size (L x W x H)
455 x 300 x 200mm

Exposed face area 0.091m²

CAPS

Caps are available with a smooth top surface, and in split or smooth profiles.

Size (L x W x H)
455 x 267 x 100mm - 25.9kg
455 x 228 x 200mm - 43.5kg

Exposed face area 0.0457m² - (100mm)
0.091m² - (200mm)

CORNER BLOCK

Keystone corner block is used to create 90 degree corners. It is available with a split or smooth finish.

Weight 43.6kg

Size (L x W x H)
455 x 228 x 200mm

Exposed face area 0.136m²

SLIPS

Slips are used to face concrete or piled structures to provide continuity of appearance. Split face finish only.

Weight 17.5kg

Size (L x W x H)
455 x 95 x 200mm

Exposed face area 0.091m²

Standard Colours

Flint

Yorkstone

Sandstone

Pewter

Ivory

Alternative Colours

The reproduction of colour is as close as is possible within the photographic and printed processes.
Where precise colour tolerances are vital, you are advised to view actual product samples.
Whenever practical, blocks should be mixed from more than one pack.

SLOPE-LOC

A Straightforward Dry Lay Block System For Facing Retaining Slopes

SLOPE-LOC COLOURS

Flint

Yorkstone

Sandstone

Slope-Loc is ideal for aesthetic slopes and bankings

Slope-Loc can be used domestically in garden retaining wall projects or on a larger scale in commercial applications for embankment repairs and situations where an aesthetic slope is required.

Available in three standard colours:

- Flint • Yorkstone • Sandstone

KEY BENEFITS:

- Unique economical alternative to vertical retaining walls
- Fully Professionally insured design
- All units less than 20kgs
- Proven block/grid connection
- Choice of colours - bespoke colours available to special order
- Fast, efficient delivery

Anderton
CONCRETE PRODUCTS LTD

SLOPE-LOC

The **Slope-Loc** system comprises dry laid, ribbed face concrete blocks, in combination with a HDPE geogrid, secured with a patented blue connector, offering enhanced strength characteristics that ultimately provides the ability to design and construct taller walls that can support high loadings.

Build stage cross section showing geogrid and blue grid connector

Specification

DIMENSIONS

(L x W x H) 300 x 245 x 125mm
Face area 0.0375m²

Typical Cross Section:

NOTES:

1. Wall shall be founded upon Competent Foundation Soils.
2. Slope-Loc walls have been designed based on a 5kPa Surcharge.
3. Well graded stone fill assumed with the following geo-technical properties $\phi_{pk} = 36^\circ$, Bulk Density = 20kN/m³.

Suitable for garden projects and large scale commercial applications

3

FENCING & BUILDING

OVERVIEW - FENCING & BUILDING

Anderton Concrete has a proven track record over many years of supplying precast concrete elements to the construction industry.

Anderton Concrete specialises in providing precast concrete fencing and building solutions for all applications and our extensive product range is able to satisfy all builders merchants needs. The product range includes slotted fence posts, prestressed lintels and padstones, wall copings, pier caps, edgings, domestic inspection chambers, postmix and much, much more...

If you are looking for a company who always puts the customer first, for a company with national coverage and a company that is equally equipped to supply The Nationals, Buying Groups or the Independent Merchant then Anderton is the natural choice.

Manufactured to BS EN 12839

Anderton Precast, the choice for merchants and construction nationwide

LITECAST FENCING PRODUCTS

Contracting

Do-It-Yourself

Health & Safety is a pre-requisite in today's society both commercially and domestically. The construction industry is certainly no exception and because of this, Anderton Concrete is in pole position in terms of research and development to alleviate these concerns wherever possible.

Anderton Concrete was the first company to market a slotted post and panel fencing system that offers:

- Significant weight reduction
- Strength and robustness
- Affordability

Anderton
CONCRETE PRODUCTS LTD

LITECAST FENCING PRODUCTS

Anderton Litecast is The Future of Fencing

Why Choose Litecast?

- Makes light work of any fencing project
- User friendly
- Up to 45% lighter than traditional concrete
- Cost effective and easy to install
- Reduces site transport costs
- Steel reinforced
- Long lasting fencing solutions
- Speedier assembly
- Can be painted for a more rustic effect
- Makes lifting easier

Slotted Posts

Anderton
 CONCRETE PRODUCTS LTD

SEMI-DRY SLOTTED POSTS

Anderton Concrete **Semi-Dry Slotted Posts** combine a rustic appearance with strength and robustness to provide a long lasting fencing solution. The high strength concrete post and gravel board is steel reinforced for extra stability. The Anderton Concrete semi-dry post unlike the timber alternative is completely unaffected from attack by moisture. Anderton Concrete semi-dry slotted posts provide a high strength product.

Fence Height	Post Length	Width	Weight (kg)	Pack Size

Ends and Corner Posts available to suit

GRAVEL BOARDS

Using the Anderton Concrete range of slotted posts is an ideal way to produce high quality fencing and these, together with our wide selection of **gravel boards** offer strength, value and cost effectiveness.

Anderton Concrete gravel boards prevent timber from coming into contact with the ground thus preventing rot and decay. Anderton Concrete gravel boards are available in various sizes in both 'wet cast' and 'semi-dry' finish. We offer a complete range of styles including plain, recessed and rock-faced.

FAST-SET POST MIX

ANDERTON POST MIX is suitable for fixing all types of concrete, wooden, plastic and metal posts, signage and bollards.

The product is ready for immediate use. No mixing required.

- fast setting, high strength
- pre-mixed concrete
- just add water
- easy to handle 20kg bags
- 70 bags per pallet
- ideal for fixing fence posts and bollards

Instructions for use

1. Dig a hole to suitable depth: As a guide a 2.4m post should have approximately 0.6m below ground.
2. Position post in the hole and check for alignment with a spirit level.
3. Pour half the Anderton Post Mix into the hole around the post and add clean water: Approx 2.0 litres dependent on ground conditions.
4. After a couple of minutes re-check the post alignment.
5. Pour the remaining Anderton Post Mix into the hole and add clean water: Approx 2.0 litres dependent on ground conditions.
6. Allow 10 to 15 minutes depending on temperature and humidity.
7. Leave at least 1 hour before fixing anything to the post.
8. Anderton Post Mix should not be used if the ground is frozen or if temperature is below 5°C.
9. Quantity of Anderton Post Mix required will vary upon local ground conditions, size of hole and post etc but for most fence posts two 20kg bags will be sufficient.
10. Stored under dry conditions, an unopened bag of Anderton Post Mix will have a usable life of 6 months.

Health & Safety Information

- Personal protective equipment must be worn at all times when handling this product.
- Avoid contact with exposed skin.
- Care must be taken to avoid injury or strain when lifting bags.
- A full Health & Safety Datasheet is available on request.

ANDER-TURF

GULLY SURROUNDS

Ander-Turf

Ander-Turf is the environmentally friendly solution to provide parking areas with a more aesthetically pleasing approach. The grass grid system supplied by Anderton Concrete utilises the latest manufacturing techniques and is a strong and durable alternative to traditional parking area construction.

Gully Surrounds

Anderton Concrete gully surrounds prevent splash back to surrounding paved areas from down-pipe discharges. They also help to prevent unwanted debris entering a drainage system, reducing the likelihood of blocking.

RAILWAY PRODUCTS

OVERVIEW - RAILWAY PRODUCTS

Anderton Concrete is the market leader in the supply of cable protection products to the UK rail industry.

Anderton Concrete manufactures the full C/1 range of troughing products including Tee Pieces, Transitions and Curves, designed to comply with Network Rail standards and as such, has full Network Rail Approval status, Certificate No. PA05/00318 and Link-Up accreditation.

Anderton Concrete offers the widest range of complimentary precast products into the UK Rail Industry, including Drainage Catchpits, Signal Bases, Point Rod Rollers, Ballast Boards, Posts, Postmix and much, much more, all used extensively throughout the rail infrastructure.

Anderton Concrete holds significantly high levels of stock and is allied to a nationwide distribution network ensuring fast, on time deliveries.

Based on a solid reputation for delivering quality products and providing a first class service, Anderton Concrete is committed to continued product and process development ensuring that all customers receive complete satisfaction.

Anderton Concrete is the natural choice for the contractor.

- Approved Supplier to Network Rail
- Member of the Rail Alliance
- Registered Supplier to Link-up

ANDERLITE™ TROUGHING

UP TO 30% WEIGHT REDUCTION OVER TRADITIONAL ROUTE SYSTEMS

The **Anderlite Troughing System** is a lightweight cable route system which combines the strengths and benefits of traditional methods, plus a reduction in weight of up to 30%. This lightweight advantage is both user friendly and cost effective.

The Anderlite range of products have an identical profile to the current C/1 troughing range, thus a transition from system to system is seamless and requires no alteration to traditional lineside infrastructure equipment or practices.

The Anderlite Cable Route Troughing System is the most cost effective lightweight system to procure in the UK, and is up to 50% cheaper than alternative lightweight systems currently on the market. Once procured the Anderlite System provides savings in on-site labour costs and offers a speedier installation process.

Anderlite reduces the risk of manual handling concerns and minimises labour requirements. Also the general reduction in the weight of the product reduces transport costs by up to 20%, lessening the carbon footprint for all industry partners and providing cost savings over traditional systems. The unique cementitious mix design utilises up to 45% of recycled materials which reduces the environmental impact of the product.

The Advantages of Anderlite Troughing

Network Rail Approved	✓	Compatible with existing systems	✓
Environmentally friendly	✓	Complete range of C/I sizes	✓
Up to 30% lighter than traditional systems	✓	Unique mix design	✓
Reduces manual handling concerns	✓	Reduces transport costs by up to 20%	✓
Cementitious based	✓	Optional cable theft deterrent system	✓
Cost effective in purchase	✓	Fire resistant	✓
Cost effective in installation	✓	Weather resistant	✓
Tried and tested	✓	Sulphur resistant	✓
Strong, robust, durable	✓	Anti-static	✓
Long lasting stable installation	✓	Whole life costing solution	✓

ANDERLITE™ TROUGHING

Anderlite retains sufficient mass to ensure that once lineside it provides a stable installation that is free from future movement, 'snaking' or disruption brought about from train movement, severe weather conditions or ground movement.

The system also offers the optional benefit of being able to protect cables against theft when used in conjunction with the Anderton Route Security System.

Other inherent qualities of the Anderlite system are its resistance from sulphur attack in certain ground conditions and its excellent resistance qualities against fire and weather. It is also anti-static whilst having no detrimental impact on other lineside infrastructure equipment.

REDUCES TRANSPORTATION COSTS BY UP TO 20%

- Please note once the lid is fitted the internal capacity of the trough will be reduced.

NETWORK RAIL APPROVED

ANDERTON INTERLOC™

ANDERTON INTERLOC is designed to prevent the unauthorised removal of trough lids, thus safeguarding all standard power and telecommunication systems.

Each adjoining lid is inter-locked by two **ANDERTON INTERLOC BRACKETS**, thus utilising the weight of each unit, making vertical uplift virtually impossible.

For additional security the **ANDERTON INTERLOC BRACKET** is equipped with a tensile clip which, when fastened secures each lid to each trough, thus making the route totally secure.

When looking for a totally secure locking system **ANDERTON INTERLOC** is the natural choice for the contractor.

Patent applied for.

THE ANDERTON INTERLOC™ SYSTEM

- Secures run of lids to trough route
- Prevents vertical uplift
- Maximises internal trough capacity
- Easily fitted to existing troughing routes
- Rapid installation
- Cost effective in purchase
- Supplied in Bags of 20
- Interlocks each adjoining lid
- Prevents lateral movement
- No alteration to a standard lid
- Lightweight
- Ease of authorised access
- Cost effective in installation

BALLAST RETAINING BOARDS

Anderton Concrete **ballast boards** are the ideal way to prevent the spread of ballast. Quick and easy to install Anderton ballast boards provide an instant solution to an ongoing problem. Anderton Concrete ballast boards contain steel reinforcement for extra strength and durability, they can also be delivered to site in composite loads with other Anderton Concrete railway products.

Product Description	BRB Cat/No	Size	Weight (kg)	Pack Size
Ballast Board	4/013298	1830 x 300 x 50	60	20
Ballast Board		1830 x 150 x 50	30	40

KING BOARDS

Anderton Concrete **king boards** provide the ideal engineered solution to create a line side recess to house vital infrastructure equipment or a position of safety for work personnel.

The heavy duty king board product has additional reinforcement detail to provide added protection against soil pressures.

Units are available in a variety of sizes.

STATION PLATFORM MATERIALS

Anderton Concrete is a manufacturer and supplier of **platform copings** and **oversail blocks** for use on the railway infrastructure. Anderton Concrete copings are independently tested by a UKAS testing laboratory and conform to BS7976-2: 2002 Pendulum Test.

Anderton Concrete manufacture as standard various sizes of coping, in a traditional grey colour, in either an 'as cast' or exposed aggregate finish. Anderton Concrete also has the expertise to offer bespoke copers, in a variety of sizes, colours and surface finishes, please contact our sales office for further information.

Anderton Concrete oversail blocks are manufactured to complement the range of Anderton Concrete Platform Copings. Each unit has a side cut out to accommodate location dowels.

MISCELLANEOUS PRECAST

OVERVIEW - MISCELLANEOUS PRECAST

Anderton Concrete has for many years supplied various precast solutions for many different construction applications. An integral part of the traditional Anderton Concrete product portfolio is solutions for cable protection and cable identification. Anderton Concrete is the natural choice to the utility and power industries.

To further complement its already extensive product range Anderton Concrete offers a **bespoke precast** manufacturing service. The Anderton bespoke team offers experience and prides itself in its ability to turn around enquiries to meet the most demanding of deadlines. Anderton Concrete bespoke provides precast solutions to your individual concepts and designs.

UTILITY DUCTING

Anderton Concrete **ducting** has been at the forefront of cost-effective cable and pipeline protection for many years. Complete with removable lids for easy access Anderton Concrete offer a wide range of sizes to satisfy all applications and installation projects.

HI-AX LID

The **Anderton** Hi-Ax has been designed to withstand an 11.5 tonne wheel loading thus allowing vehicular overrun. The design is a steel framed construction, infilled with concrete to maintain the aesthetic appearance.

Please note lids with underbracing will reduce the internal capacity of the trough.

Anderton
 CONCRETE PRODUCTS LTD

CABLE PROTECTION & IDENTIFICATION

Anderton Concrete **cable covers** are used extensively throughout the UK serving as a warning to personnel working or excavating in close proximity to pipes or live cables. Additionally, cable covers act as a physical barrier against accidental damage and help to eliminate costly repairs and regular maintenance. They also offer personal protection to site operatives.

Service Identification

The Anderton Concrete range of marker posts and marker blocks identify the exact location of buried utility services. They act as a warning against accidental damage and help to reduce expensive search costs.

CONCRETE PRODUCTS LTD

BEAM & BLOCK FLOOR ANCILLARIES

Beam and block flooring is the traditional and cost-effective suspended flooring system for ground and upper floors and Anderton Concrete now offers pre-cast ancillary products to complement this system.

Closure Block

Anderton Concrete **closure blocks** are designed to fit between floor beams on the bearing ends. This saves cutting bricks or blocks when building the wall through the ends of the beams using standard centres.

Coursing Slip

Anderton Concrete **coursing slips** save a split face brick course at side bearing or between end bearing.

COURSING SLIPS

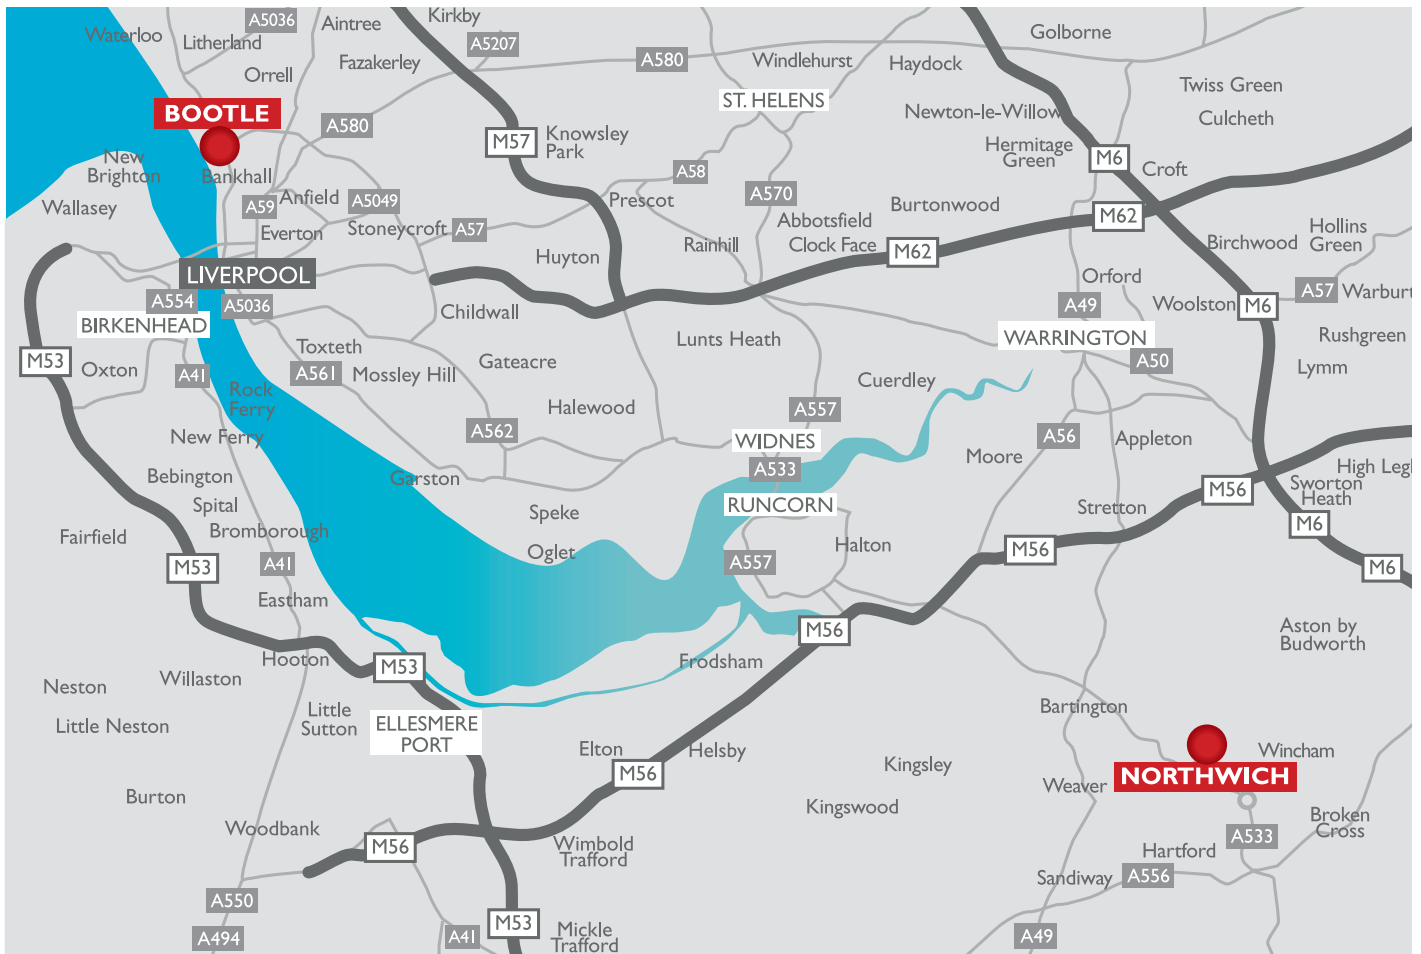

Product	Length	Width	Height	Weight	Pack size
35mm Slip	385	100	35	2.3	228
45mm Slip	385	100	45	2.9	204

CLOSURE BLOCKS*
