Your home, your style

The finishing touches can make all the difference when it comes to creating your dream kitchen. Caple sinks are made in ceramic, granite, glass or stainless steel and our taps range from the classic to the hi-tech. They bring your kitchen to life by combining practicality with style, whatever your taste or budget.

the choice is yours

Whatever kitchen design you've decided on, Caple has the perfect sink and tap to set it off. Making some key decisions now will help you find just the right combination.

Think about sinks

People use sinks in many different ways. Do you require a drainer? How many bowls do you need and what sizes will be most useful? How about the space you have available? Now turn your attention to style. What will go best with your kitchen? Finally, you need to choose the finish – traditional ceramic, contemporary stainless steel, luxurious glass or practical granite?

Time to talk taps

With Caple, a tap is not just a tap. You need to choose the type of lever, whether you want purified water or a pull-out spray head? Or perhaps a 3in1 tap with steaming hot water when ever you need it? And, what do you want your tap to look like? The section on 'tap features and styles' on pages 94-97 will help you. From the visually striking to the practical and easy to use, there's a tap for everyone.

Note: If you have already set your heart on a particular style of sink, this may affect the taps you can choose. For example, a sink with two tap holes will require a bridge, pillar or deck tap design.

Inset sinks (1)

How are they fitted? The feature lip around the sink's edge fits on top of the worktop.

What type of style? Neat and tidy finish available in ceramic, granite, glass and stainless steel.

How are the taps installed? Fitted to the sink itself. However, individual bowls may require the tap to be mounted into the worktop.

Which worktops are compatible? Granite, solid surface, wooden or laminate. This is the only sink type that can be used with laminate.

Undermounted sinks (2)

How are they fitted? Mounted beneath the worktop, which is cut to fit the size of the bowl.

What type of style? Distinctive, fully integrated look in ceramic, granite and stainless steel.

How are the taps installed? Usually mounted into the worktop behind the sink.

Which worktops are compatible? Granite, solid surface or wooden.

Farmhouse style sinks (3)

How are they fitted? They can be installed under the worktop with the front face visible – to accommodate the depth, you'll need a short height cabinet.

What type of style? A period Victorian design – traditionally ceramic.

How are the taps installed? Usually mounted into the worktop, although some sink models allow for them to be fitted to the sink.

Which worktops are compatible? Granite, solid surface or wooden.

Dual housed sinks

To make your choice easier, we offer a range of individual bowl sinks that can be housed either inset or undermounted. See our stainless steel Zero and Mode sinks on pages 69-78, or check out our ceramic Cheshire, Square bowl and Warwickshire sinks on pages 27-30.

Caple products are manufactured to the highest standards, all of our sinks are tested to BS EN 13310:2003 and CE certified.

traditional tastes

Often the heart of the home, the traditional kitchen is warm and inviting. With elegant detailing and subtle design elements it has a comforting, old world charm.

If your kitchen is traditional or country style, you can't go wrong with a classic ceramic. You can choose from the ever-popular and practical farmhouse style to more subtle and sophisticated designs in many shapes and sizes.

They don't come more traditional than the generously proportioned Belfast sink. Or a smooth and sophisticated

inset design might be more to your taste. Whichever you plump for ceramic sinks are hardwearing and easy to maintain with their smooth, gleaming white glaze. Caple ceramic sinks are manufactured using time-aged methods and materials, making every one unique.

An absolute classic

The farmhouse style ceramic sink is Victorian in design with a simple, ageless beauty. Keep with tradition by adding a bridge style tap or go for a sophisticated twin lever monobloc tap – a little less ornate but equally classic. A warm brushed nickel finish will add a touch of antique styling.

modern and minimal

The last thing you want from the kitchen you choose today is for it to go out of fashion tomorrow. But smartly designed contemporary styling retains its freshness through clean lines, bold colour and striking aesthetics.

Where do you start when choosing a contemporary sink and taps? Stainless steel is being fashioned into ever more inspired and imaginative designs. Its sleek lines and neutral finish complement many colour schemes and appliances.

The practical granite sink has become a style icon. Quite right too, as it offers you immense durability, and comes in an array of glamorous colours.

In the spirit of modernity, why not combine different shapes and sizes? Mix bowls together to reflect your individuality and add the ultimate designer tap for a real talking point.

Go for an industrial look with a pull-out spray or choose a slim line curved tap for that fresh, contemporary feel. Modern styling is all about contrasts so you can mix and match to your heart's content.

ceramic sinks

At home in any kitchen, a ceramic sink offers you the simple elegance of a bygone era, yet can look the part in the most contemporary settings.

farmhouse sinks

These time-honoured classics have been re-interpreted for today's kitchen. Their generous proportions are perfect if you want to make a sizeable design statement.

Accessorize

Farmhouse sinks are by necessity hard-wearing and have to be very durable.

A helping hand with their upkeep would obviously go a long way, so there are now accessories available that help to do this, yet are still stylish and fit easily with the character of a Farmhouse sink.

From chopping boards to drainer boards and sink grids (shown above fitted in a CPBS600 sink) the choice is yours.

Big on character

This exceptionally handsome sink puts its good looks on show with a striking curved slab-front face. It looks superb in a traditional setting or as a design piece within a contemporary kitchen. Hand-made using traditional methods and materials, our ceramic sinks are extremely resilient thanks to a non-porous, scratch, heat and chemical resistant finish.

Some taps can be mounted neatly into the worktop itself, so you can choose larger, more sculptural tap designs. As the sinks are fitted beneath the worktop, they can be used with granite, solid surface or wooden worktops.

Note: Each sink is hand finished, so no two sinks are ever alike – sizes may vary by plus-or-minus 2%. Therefore, we recommend that you measure the actual sink before fitting.

CPDRAINER

W 460mm

Subtle and sweet, this square ceramic drainer has been specifically designed to complement farmhouse style sinks. It sits neatly on top of the worktop next to your sink and when not in use, can be simply stored away.

inset and undermounted sinks

Designer draining

The design of the drainer pattern can have a dramatic impact on the overall look of the sink. For a flat, modern style, go for our Avalon sinks (see page 23). If you want something softer, how about the Colorado range?

Each sink is hand finished, so no two are ever alike. This means sizes may vary slightly so you'll need to measure your sink before fitting.

Choose from inset or undermounted ceramic sinks to make a distinctive style statement. A classic yet contemporary look that exudes elegance and fits easily into many different styles of kitchen.

With their gently raised lip and smooth lines, inset sinks blend subtly into your worktop surface. Available in many shapes and sizes, this versatile style drops seamlessly into any kitchen.

Fully integrated beneath the worktop, undermounted sinks give a very distinctive look to your kitchen. Used with granite, solid surface or wood worktops.

Note: Each sink is hand finished, so no two sinks are ever alike – sizes may vary by plus-or-minus 2%. Therefore, we recommend that you measure the actual sink before fitting.

individual bowls

Round, square, rectangular... there's a shape and a size to match perfectly with your kitchen. You can even mix and match for a look that's all your own.

Our elegantly proportioned individual ceramic bowls are more than just practical and hardwearing. They give you complete design flexibility, so can you to choose the size, shape and number of bowls to suit the way you use your kitchen. Because the tap is set into the worktop, you also have the freedom to fit our larger, more daring tap designs.

For a clean and classic look, try our traditional round bowl. For something chic and contemporary, how about a single ceramic bowl and a stainless steel tap?

Note: Each sink is hand finished, so no two sinks are ever alike – sizes may vary by plus-or-minus 2%. Therefore, we recommend that you measure the actual sink before fitting.

granite sinks

These are practical and beautiful sinks to cope with the demands of everyday living. Granite is synonymous with durability and can also offer you an array of stylish colours to match your décor.

material innovations

New granite materials are being developed all the time and this durable, versatile and stylish material is becoming increasingly popular. Our range consisting of four families are made from Geotech, which is available in four sophisticated colourways – metallic Anthracite, matt Desert sand, matt Chalk white and matt Pebble grey.

Product details

1 Canis sink in Geotech metallic Anthracite – see pages 40-43, 2 Veis sink in Geotech matt Pebble grey – see pages 44-47.
3 Leesti sink in Geotech matt Desert sand – see pages 48-49.

Why choose Geotech?

This hi-tech material is created from a unique blend of natural quartz and top grade acrylic. There are many reasons why it's such a great choice.

Naturally good looking

These sinks offer the beauty of natural stone, yet can be moulded into an unlimited number of inspiring designs.

Kind on the environment

Geotech is made up of around 80% natural materials and manufactured using low energy consumption.

Keeps its colour

Completely colourfast, the metallic and matt colour finishes will both stay fresh and vibrant.

Highly durable

Produced to be extremely hard-wearing, it takes the knocks and scrapes of daily life in its stride.

Cut-resistant

Both cut and scratch resistant, Geotech will retain its unblemished surface through thick and thin.

Heat and burn resistant

Hot pans? No problem – resistant to heat, cracking, discolouring, blistering and warping.

Stain resistant

Geotech is resistant to permanent staining. As long as it's cleaned regularly, it won't discolour or stain.

Easy to clean

All you need to keep Geotech sparkling is warm water and washing-up liquid.

sotera inset sinks

Modern, minimal design made in our advanced Geotech material make Sotera a very attractive and practical combination.

With strong, straight lines the Sotera brings a bold presence to any kitchen. A simple, yet refined drainer pattern and the subtle introduction of stainless steel detail within the bowls

and drainer, enhance Sotera's undoubted feeling of quality. Available in all four Geotech colours, Anthracite, Desert sand, Chalk white and Pebble grey, the choice is yours.

Pick a colour

Not only is Geotech available in a delightful selection of colours hand-picked to reflect the latest fashion trends, but its in-built resilience means it will look as good as new for many years.

Our stunning Anthracite colour is infused with a sparkling metallic fleck, guaranteed to add a touch of glamour to your kitchen. Desert sand has a warm, natural feel if you're looking for understated elegance and Chalk white's rich white tones provide the ultimate in relaxed sophistication. If you prefer a slightly industrial, yet ultra modern tone, Pebble grey is perfect to create this look.

veis inset sinks

Looking for a durable, stylish sink with modern clean lines and subtle design hints? If so, you've found it with Veis.

A drainer pattern with simple, clean lines and bowls with subtle curves give Veis an understated but thoroughly modern feel. Made from our hard-wearing composite material Geotech, these sinks combine style with practicality. Choose from single bowl or bowl and a half versions to

fit the size and layout of your kitchen. Four cool colours to choose from, Anthracite, Desert sand, Chalk white and Pebble grey, means there's one to create the ambience you're after.

leesti inset or undermounted sinks

These bowls can be inset for a statement feature or discreetly undermounted offering a truly contemporary look. Practical, versatile and stylish they look great with any worktop.

With their gracefully subtle corners and the satisfying proportions Leesti exudes elegance. Choose from a single or a bowl and a half sink, inset or undermounted, to give you exactly what you want. For a sophisticated style, why not try two single bowls side by side?

Four cool colours available, including three matt colours Desert sand, Chalk white and Pebble grey and a flecked metallic Anthracite, mean there's one to create the ambience you're after.

glass sinks

For a distinctively modern alternative to the traditional sink, our glass sinks are hard to surpass. Durable stainless steel bowls with fresh designs, these sinks will stand out in any kitchen.

vitrea inset sinks

Glass is renowned for being hygienic and easy to clean. With the addition of it being tempered, this makes for a strong and highly practical sink surface. The elegant styling of the coloured glass with bowls constructed from the professional cooks choice - stainless steel; make Vitrea sinks a distictively modern alternative for your kitchen.

This highly durable and tempered surface is impact resistant and extremely strong. The hygienic glass surface is easy to clean, simply wash with warm water and washing up liquid

The glass surface is stain resistant, as long as it's regularly cleaned, these sinks won't discolour or stain.

Completely colourfast, the black and white finishes will both stay fresh and vibrant.

Hot pans? No problem – the surface is resistant to heat.

This sinks offers the perfect contrast of glossy glass and satin steel designed to be a feature in any kitchen.

The glass drainer functions similarly to undermount sinks set directly into the work surface therefore small amounts of water may remain. This can simply be wiped away.

stainless steel sinks

Stainless steel has been the automatic choice for professional cooks over many years. Why not make it yours? It is tough, resilient and highly practical – and in our range of styles and shapes it looks sensational too.

inset sinks

For clean, contemporary and minimalist surroundings, inset stainless steel sinks are hard to beat. Durable and easy to care for, their smart, sleek and industrial good looks always shine out.

Inset sinks can be neatly fitted into any surface type. Our range is grouped into families, making it easy to find the style and bowl combination to suit your kitchen. Each of these sinks feature built-in drainers, with a distinctive pattern for a unique family look.

Do you need a drainer on the left or right side? With many of these sinks you have the flexibility to choose. For a conventional look, go with a single bowl with drainer. Or for something a little different, how about one and a half or double bowls with a drainer?

STAINLESS STEEL

Maintain the steel theme by pairing a stainless steel sink with one of our luxury stainless steel taps. They offer a contemporary alternative to popular polished and brushed chrome. Attractive and durable, they add a slick, professional touch to your kitchen – look out for the logo.

Low profile

For a cleaner, sleeker fitting, our Blaze and Cubit sinks feature a low profile edge of only 1mm.

cubit inset sinks

Cubit sinks add minimalist design to the benefits of stainless steel sinks, to create a sink for those that love clean lines and no nonsense modern styling

Made from stunning stainless steel with a rich satin finish, the Cubit sinks are both contemporary and durable and offer an alternative to the popular polished or brushed steel sinks.

Sharp, crisp edges and an uncluttered design, coupled with a sleek, low profile edge of only 1mm, give the Cubit sinks an industrial quality that many modern designers like to use in today's cutting edge kitchens.

zero individual and multiple bowls

For the razor-sharp, minimalist look adopted by designer kitchen aficionados, nothing is better than Zero. These bowls feature crisp edges and clean lines in an uncluttered design.

Zero sinks can be inset or undermounted allowing you to combine them beautifully with any worktop. The striking geometric bowls come in many sizes, for countless creative possibilities. With multiple bowls and a sleek shallow

drainer also available you can let your imagination run riot. Made from stainless steel, they won't rust, stain, fade or crack, remaining pristine whatever you put them through.

Looking sharp

The clean lines and minimalist styling of our Zero sinks suit modern kitchens to a tee. Featuring a unique angular bowl with a 'zero' degree radius and tapered base, they'll take your designer kitchen to a new level.

mode individual and multiple bowls

Chic, modern and sophisticated sums up our Mode collection. These smart stainless steel bowls provide a wide variety of options that will finish off your modern kitchen – beautifully.

Mode's distinctive look combines ultra modern straight edges and subtly curved corners. The result? A contemporary sink with a touch of class.

With so many shapes and sizes to choose from, including single and double bowl options and a matching drainer,

you'll find just the right combination for your kitchen.

Try two medium bowls together to create a balanced aesthetic, a small and a large bowl for contrast, or a large bowl and shallow drainer for simple elegance.

Truly versatile

Whether you prefer an inset or undermounted look, Mode sinks are flexible enough to accommodate the worktop and tap of your choice. Go professional with a spray tap or minimal with an elegant modern one. Show off your sink against a solid wooden worktop or keep it cool with a sleek granite surface.

form individual and multiple bowls

With its gentler, rounded design the Form collection combines the advantages of stainless steel with traditional styling – a popular classic.

The charming, individual bowls come in a selection of shapes and sizes. Or if you want a more personalised combination of sinks you can choose from our multiple bowl options. Choose an undermounted sink for use with wooden, granite or solid surface worktops, or one of our inset models that can be used with laminate surfaces.

Crafted from stainless steel for that professional feel, Form sinks will keep their shiny good looks whatever you throw at them. Practical, stylish and functional, this collection meets the most demanding kitchen criteria.

Options to suit you

Do you like the clean look of individual bowls but also need a drainer? Our round inset drainer option could be the answer. For a modern twist on the traditional country cottage style, pair this drainer with a single round bowl dropped into a solid wood worktop.

sink accessories

Choose from our selection of practical and simple-to-fit accessories to add the perfect finishing touch. From wastes in a variety of finishes to plumbing kits, it's easy to make sure every detail of your sink not only looks superb but works perfectly too.

In some cases, the waste and overflow are included with the sink, other items such as plumbing kits, are often only available separately.

The plumbing options suitable for each sink are shown in their feature specifications. In this section you will find the correct waste, fitting, plumbing kit and accessories to complement your chosen sink.

taps

Today's taps are more than just functional objects, they are mini works of art. With so many design styles and types of technology to choose from the right tap can set the tone for your entire kitchen.

the inside story

Taps aren't as simple as they look. How they work can be quite technical. Before you make your choice here are some things to think about.

Water pressure

Some taps need more hot water pressure than others to flow at the same rate. A pressurised water heater system will provide enough water pressure for any of our taps. However, an unpressurised system may not.

You will need to calculate the pressure before choosing a tap that has a minimum requirement – otherwise it might not work properly. To do this, measure how far the water tank is above the tap in metres and divide by 10. This gives the water pressure in bars. Remember that any bends or junctions in the pipework will reduce the pressure.

If you are not sure how to calculate your hot water pressure, ask your plumber. Water pressure can be increased by adding a separate water pump.

Water efficient CSH compliant taps

We have developed a collection of taps specifically designed to conform with the water flow required for the Code for Sustainable Homes (CSH) Level 3. These taps have a flow rate of 4 litres per minute or less when measured at 3 bar of pressure. Look out for the water efficiency logo.

Single flow

In a single flow tap, there is one channel for hot and cold water to get the correct temperature required.

Dual flow

A dual flow tap contains two channels, which separate the hot and cold water until they leave the tap – this means you can change your water temperature quicker than with a single flow tap.

Valve types

You can choose from many different valve options to control how your tap works. In a single lever model, the lever is moved in two directions to control the tap. Other types of tap use either basic compression valves or the superior quarter turn valves that respond quicker. Or if you are looking for something a bit more advanced the LUC/CH tap uses a hi-tech electronically operated valve (see page 113).

which type of tap?

To help you choose from our extensive range we've put together a quick guide. It will help you choose the perfect tap for your kitchen – and your lifestyle.

Vapos 3in1 steaming water tap

This is fast becoming a household essential, a 3in1 tap that gets the job done quickly. Whether you want to make a hot beverage, blanch vegetables or reduce boiling time for pasta, Vapos taps have an instant supply of 98°C steaming water. Gone are the days of waiting for the kettle to boil.

Vapos taps supply fresh cold water, regular hot water and filtered hot water up to 98°C whenever you need it. And, the incredibly advanced filtration system means it provides the best water quality possible.

The electronic tap

Ingenuity and considered design, LUC/CH has an electronically operated valve with an intuitive LED light indicator. The subtle LED ring around the handle changes from blue to red depending on the temperature of the water flow.

The ultimate style statement with a unique slimline aesthetic, low profile base and offset control, this tap represents true innovation. The functionality is equally as impressive featuring a detachable nozzle and spray flow making it easy to move around the sink freely.

Single control

Simplicity itself, with everything controlled by a single lever – move it left and right for temperature, or up and down for pressure.

Dual control

Added control and ease of use, with a dedicated lever controlling both hot and cold water.

Pull-out taps

The only tap for professionals, pull-out taps let you do so much more at your sink. Our stylish range is brilliantly designed, with top models giving you a minimum pressure rate of 0.8 bar.

Caple Puriti

Fresh filtered water on tap? With a Caple Puriti filter tap you can have ordinary hot and cold water, as well as purified water from one single fitting – as an extra lever diverts water through the filter.

The activated carbon filter removes chlorine, rust and sediment so you can feel better about the water you consume. You might also find it improves the taste of your coffee and tea, as well as your cooking and baking.

Each filter lasts approximately six months and can easily be changed without tools. To order your replacement filters go to www.caple.co.uk for next day delivery.

stainless steel taps

STAINLESS STEEL

If Chrome taps are not your style then Caple have an extensive range of stainless steel taps to choose from.

Stainless steel is much more than a different look and finish. Unlike Chrome taps, stainless steel taps do not have a coating, are but solid steel. Also known as Inox steel, it is an alloy with a 10%+ chromium content and this is what makes it so resistant. The chromium content forms a passive film of chromium oxide on the metal surface protecting the tap.

At Caple we don't believe in compromise. Our taps are made from the highest grade stainless steel, giving our stainless steel taps great resistance to corrosion.

But our taps are not only tough and well engineered but beautifully styled. Styles from the more classic to the absolute contemporary and with 12 in the range to choose from you are spoilt for choice. Of course, the stainless steel tap range particularly compliments the range of Caple stainless steel sink range. Bring them together they make a great finishing touch to any kitchen.

Vapos 3in1 steaming water tap

Vapos taps supply fresh cold water, regular hot water and filtered 98°C steaming water, the perfect temperature for preparing tea, blanching vegetables and assisting the cooking of pasta or rice.

Water conditioning technology provides exceptional accuracy for scale and acidity control for increased boiler protection, this also means outstanding food and beverage quality.

Quick and simple installation allows the tap, filter and boiler to be easily retrofitted. Finished in stunning stainless steel, Vapos taps exude style and practicality.

A large boiler capacity means 2.4 litres of steaming water is ready for use whenever you need it. With a temperature range of 50°C-98°C it uses less electricity than a 40W light bulb.

WRAS
APPROVED

Boiler dimensions: width 200mm, height 300mm, depth 225mm

Outstanding water filtration

Offering a new standard of water filtration technology, providing extraordinary accuracy for scale and PH control. This water filtration and conditioning technology effectively combines hardness reduction, mineral stabilization and corrosion inhibition by maintaining a controlled low carbonic acid level in the water.

It delivers the best available water quality for hot drinks by removing lime scale build up in the boiler (provided filters are installed and maintained / exchanged in line with manufacturer recommendations).

It includes DuoBlend® valve technology for the most accurate bypass ratio and a 5µm Carbon block membrane for particle protection, reducing tastes and odours such as chlorine and chlorine by-products, THM's, PAH's and pesticides such as Simazine, Atrazine, Lindane and Dieldrin.

Each filter lasts approximately six months and is easily changed without tools. Order your replacement filter cartridge (PURITI3) or full fitting kit including cartridge (PURITI4 shown below) at www.cople.co.uk for next day delivery.

How the 3in1 taps and filter system works

The cold water from your water supply passes through the filter into the 2.4L boiler. The water temperature can be easily adjusted from 50°C-98°C to suit your requirements by simply turning the dial located at the front of the boiler.

For steaming water use the smaller lever on the left hand side of the tap. Push down the lever to release the child safety mechanism then turn and hold to start a steady flow of steaming water, when

you are finished the unique spring loaded lever automatically shuts off the steaming water.

It couldn't be easier to change the filter. There is no need to cut off the water supply, just twist the used filter to release it – this automatically isolates the water supply making it easy to twist the new cartridge into place.

Perfect cup of tea

Due to the technologically advanced filtration system all the water's impurities are reduced, even in hard water areas. Fantastic filtration means you get the best quality tea every time.

puriti

Great looking taps in a wide range of styles and designs, and with more to them than, perhaps, first meets the eye.

At first glance our Puriti taps don't look a great deal different from any of Caple's other beautiful taps, and like other Caple taps they come in a range of styles.

Of course, they deliver ordinary hot and cold running water as with any other tap. However, on closer inspection you will find either a third lever, or sometimes fully integrated into the standard design. This tap supplies clear, filtered and purified water literally at the turn of a tap.

An ingenious filtration system is hidden from sight in the kitchen unit, and by turning the filtration tap, your normal

cold water supply is diverted via the Caple filter to the tap and in to your glass. It is also great for areas with particularly hard water. By using the filtered water in kettles and cooking you greatly reduce the damaging impact of lime-scale build up in appliances and reduce the effect of water impurities during food preparation, whilst also improving tea and coffee.

So, no more filter jugs cluttering up your fridge, or plastics bottles clogging up the environment just fresh, pure, healthy water.

Caple Puriti filter AVAILABLE TO BUY ONLINE

As the filter tap is turned the normal cold water supply is redirected through a series of filtration processes including activated carbon. This removes almost all chlorine improving the taste, and other impurities such as particulates, bacteria, rust, heavy metals and pesticides, while also acting as a scale inhibitor.

It also helps maintain the pH balance of the water, which is much healthier than consuming overly acidic or alkaline normal tap water.

The Caple Puriti filter is discreetly installed under the sink. It will be easily accessible for changing which will need to be done about every six months. This is a very straight-forward process that does not require any tools.

Compared to other filtration systems on the market, the Caple Puriti filter can last up to 4x longer. Filtering up to 6,000 litres compared to only 300 – 1,500 litres.

pull-out

More and more of us no longer see our kitchens as a place where we merely make something to eat but a place to experiment with new tastes and new techniques. A place to enjoy the preparation and creation of food for family and friends.

We are spending more and more time in our kitchens. Never has it been more true that they are the heart of the home.

Therefore, the demands and expectations from our kitchens, the appliances and the fittings also become more demanding. This is where Caple's range of spray taps step up to the plate.

With technology taken from professional kitchens they work on the same principle as a single lever tap design with the standard hot and cold functions. However on some models

the nozzle pulls out on an extended, flexible metal hose. By pressing the button on the side of the spray head the nozzle produces a high pressured spray or jet of water.

This is perfect for washing vegetables or fast rinsing of plates and crockery.

No busy kitchen or accomplished cook should be without one.

Pull-out and spray taps

The powerful spray makes it so much easier to wash and rinse items. Used in most professional kitchens worldwide, it's a must-have for accomplished chefs.

The secret is in the nozzle. As well as a powerful spray, some models have a long flexible hose that can be pulled out allowing you to move the tap freely around the sink.

Apex Professional – Spray

single control

Single control or single lever taps have been with us for a long time now. It is testimony to their ease of use and adaptability to great design.

With Caple's single control taps you can be sure that the engineering that goes in to one of our taps is second to none. Smooth gliding operation, robust seals and a solid finish. So now all you have to do is decide which style and

finish is best for you. With various finishes in so many designs from the classic to the cosmopolitan contemporary that will be a harder task than you might think.

Single lever

Simplicity itself, with everything controlled by a single lever – move it left and right for temperature, or up and down for pressure.

dual control

Classic does not mean old fashioned. For many of us dual control taps are a matter of personal preference. Hot on the left, cold on the right. It's as simple as that.

But even with the classic dual control, designs vary. There is the monobloc design or bridge design.

Ceramic handles to match your ceramic sink. Sleek brushed stainless steel – a premium material and very contemporary. Chrome itself. Bright and reflective. Brushed nickel – subtle

and blemish free. Pewter. Distinctive with a traditional twist. All meticulously designed and beautifully engineered.

Whichever you choose you can be sure that they all have one thing in common – Caple's uncompromising quality.

waste disposers

A waste disposer hidden away under the sink can help you recycle your food scraps and leftovers like potato peelings, chicken bones, egg shells and tea bags. It's clean, it's green and it leaves you less to clutter up your bin.

It couldn't be easier or more convenient to use. Simply turn on the cold tap and the disposer, then empty everything into the sink. The disposer grinds the food waste into fine particles and flushes the waste away down the drain.

Since more than 25% of household refuse is food, that means much less rubbish for the dustmen to take away to clog up our landfill sites, and a reduction in the amount of greenhouse gases emitted. Disposer waste can actually be recycled into a soil conditioner once it reaches the water treatment plant, so you will be making a positive contribution to your environment.

1.0hp Waste Disposal Unit

WDU100

General features

1.0hp waste disposal unit
Continuous feed
High speed magnet motor
Overload protection
Corrosion resistant 3 stage grinding system
Easy mount installation
Sound insulation
