

PENDOCK

Pendock are the UK's leading manufacturer of preformed pipe boxing and boiler casing solutions. Pendock's reputation for both quality and service is renowned and its products are used in numerous applications and market sectors. Pendock's preformed pipe boxing provides a versatile and practical solution to the problems of concealing unsightly pipework.

Project Management

Pendock can offer a full turnkey package from site measure and CAD drawing to full site installation. Our nationwide project managers are supported by experienced factory based craftsmen who take pride in the products they manufacture. All projects are supported by our office based customer service team.

Column Casings

Pipe Boxing

Floor Ducting

Boiler Pipe Casing

Bespoke Casings

Washroom Range

Pendock also offer a full range of fixings, access hatches and associated accessories.

Radiator Guard Range

- Drop down panels provide easy access for radiator maintenance
- Anti-bacterial coating provides extra protection
- Developed in conjunction with a number of NHS Trusts
- Tested by the Building Services Research and Information Association
- Additional RAL colours are available
- Full measure and design service available

Designed to maintain good thermal efficiencies, reduce surface contact temperatures and have a minimum footprint to achieve the specified surface temperature.

Radiator Guards

Pendock radiator guards have been protecting residents, children and patients by reducing the risk of burn injury in typical applications including care-homes, sheltered housing, schools and hospitals. Pendock has been supplying this style of product to the building services market since 1993.

The level of experience and expertise in this area means that Pendock is often identified as the preferred solution by specifiers. This reputation has been achieved through an uncompromising approach to design and manufacture.

Innovation and the adoption of appropriate new technologies have also helped Pendock stay ahead and provide specifiers with reliable, effective and affordable solutions. One such advance was the use of anti-bacterial agent's which kills MRSA, Salmonella, E-coli and C-difficile, this is a standard feature of all Pendock radiator guards.

Ligature resistant design features are available on all products on request. A fully bespoke design service is available where more specific shape and sizes are needed. All guards are available with all cut-outs and valve access panels with no on-site cutting required speeding up installation time and minimising disruption to patients and staff.

Supply and Fit

Supply and fit packages are available upon request, please contact the sales office on 01952 580590 or email sales@pendock.co.uk

Prima and Prima Plus Range

The Prima and Prima Plus range of guards are strong, durable and have been designed to offer a robust and value for money solution where there is a need to reduce the risk of accidental burn injury. Anti-bacterial coating is used as standard on both the Prima and Prima Plus models to maintain protection for patients and staff, particularly where hygiene standards are critical.

Ultima & Ultima Plus Range

Ultima and Ultima Plus guards have been designed to provide the ultimate in radiator guard safety and protection. The radiused 'bullnose' corners afford extra safety in situations where

patients are likely to fall accidentally or may be at risk from self-harm. Ultima guards are finished with anti-bacterial coating as standard across the range, this adds another dimension to protection for patients and staff, particularly where infection control is critical.

ST & ST Plus Range

The ST range is the most recent addition to the range designed in conjunction with NHS Trusts.

The ST guard continues the safety and protection theme by offering a sloping top panel. The radiused 'bullnose' corners continue the safety approach and all sizes are finished with anti-bacterial coating as standard.

All models have excellent low surface temperature characteristics and can be manufactured in standard white or to a specific RAL colour. A drop-down lockable panel is fitted to all the Plus models to allow for the regular routine cleaning, inspection and maintenance that may be required.

Ligature Resistance

All Pendock radiator guards can be fitted with a welded anti-ligature mesh which sits behind the radiator grille, removing ligature points. Please note that the mesh used in these ligature resistant radiator guards may inhibit the convection process.

Internal Baffle

Where a guaranteed temperature control is required a baffle can be fitted below the radiator grille. This will enable the guard to comply with regulations where surface temperatures must not exceed 43° at a water inlet temperature of 80°C and will conform to NHS Estates guidelines. Pendock Guards with this feature have been tested and approved by the Building Services Research and Information Association (BSRIA).
