- 8 Thermally Treated Cladding

arbor**Clad**

At Howarth, we offer one of the most comprehensive ranges of timber cladding available on the UK market today

Ideal for commercial, domestic and refurbishment projects, ArborClad cladding range can help transform a project from 'everyday' into a dramatic design statement.

We work regularly with architects, local builders, renovators, major contractors and national house builders to ensure that the product specified is the right product for the right situation and at the right price.

Chosen specifically for their environmental qualities, Chain of Custody is commonplace across the entire range and is available upon request.

We've got over 180 years of experience as a timber and building supplies merchant, so you can rest assured you're in safe hands.

If we can be of help in any way, please get in touch, we are more than happy to assist.

Nicholas Howarth
Managing Director

COMMITTED TO THE ENVIRONMENT

The ArborClad timber cladding range is available with full Chain of Custody certification, providing compliance with government specification for timber from legal and well-managed sources, as well as meeting the requirements of the construction industry's independent third party audit organisations. If this is a requirement please stipulate at time of ordering.

Traditional Cladding

Our traditional cladding range is a selection of the most popular timber species currently used today in the UK market for exterior cladding.

- ✓ Cost-effective range of durable, resilient traditional claddings
- ✓ Environmentally focused
- ✓ Suitable for a range of applications
- ✓ Treated Redwood, Larch & Western Red Cedar species
- ✓ Bespoke profiles and other species also available
- ✓ Can be fire treated and/or finished with a stain or paint if required.

arbor**Clad**

TRADITIONAL

Cedar

Western Red Cedar shiplap and offset cladding with square end detail. A highly durable and resilient solution.

Material density:

330-410 kg/m³
(subject to moisture content)

Natural durability class:

Class 2

Bespoke options:

Available in any required profile

Sizes available

(finished sizes shown):

19mm x 140mm in random lengths

Areas of use:

Refurbishment / Domestic /
Commercial

Durability:

Durable

Sizes shown are finished unless otherwise stated.
Subject to stock availability at the time of order.
Timber cladding, when left in its natural state, will
oxidise and turn a silver grey colour over time,
due to the effects of exposure to sunlight.

FOR MORE INFORMATION PLEASE CALL 01274 871 411

SAMPLE SERVICE

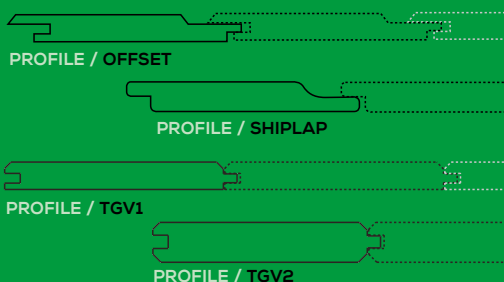

ADVICE ON FIRE RESISTANCE

TRADITIONAL

Redwood

European Redwood shiplap and offset cladding with square end detail. For use where economy is the priority.

Material density:

480-560 kg/m³

(subject to moisture content)

Natural durability class:

Class 3-4

Bespoke options:

Available in any required profile

Sizes available

(finished sizes shown):

15mm x 119mm in random lengths

19mm x 117mm in random lengths

19mm x 140mm in random lengths

Areas of use:

Refurbishment / Domestic /
Commercial

Durability:

Slightly durable. Moderately durable
if a finish is applied

Sizes shown are finished unless otherwise stated.
Subject to stock availability at the time of order.
Timber cladding, when left in its natural state, will
oxidise and turn a silver grey colour over time,
due to the effects of exposure to sunlight.

FOR MORE INFORMATION PLEASE CALL 01274 871 411

SAMPLE SERVICE

ADVICE ON FIRE RESISTANCE

TRADITIONAL

Larch

Larch shiplap and offset cladding with square end detail. A highly durable and resilient solution.

Material density:

570-650 kg/m³

(subject to moisture content)

Natural durability class:

Class 3

Bespoke options:

Available in any required profile

Sizes available

(finished sizes shown):

19mm x 140mm in random lengths

Areas of use:

Refurbishment / Domestic /
Commercial

Durability:

Moderately durable

Sizes shown are finished unless otherwise stated.
Subject to stock availability at the time of order.
Timber cladding, when left in its natural state, will
oxidise and turn a silver grey colour over time,
due to the effects of exposure to sunlight.

Thermally Treated

With improved stability and durability qualities, thermally treated cladding provides added long term benefits and flexibility.

- ✓ Softwood and hardwood options
- ✓ Improved stability, durability and performance
- ✓ Increased weather resistance
- ✓ Chemical-free treatment applied through the full board section, virtually eliminating rot and insect attack
- ✓ Environmentally focused
- ✓ Uniformity of product colour in its natural state
- ✓ More even weathering over time than traditional timber claddings
- ✓ Can be fire treated and/or finished with a stain or paint if required

arbor**Clad**

Through the treatment applied, the timber is less prone to absorb or lose moisture, helping to restrict the potential for swelling, shrinkage or distortion. The wood also acquires a beautiful brown colour and its velvet-like surface is pleasant to the touch. At its best, the wood possesses nuances of antique and fine wood shades that bring warmth to any project, be this for an internal or external application.

Cladding

The thermal treatment process consists of heating wood to temperatures (within a range of 160°C to 215°C) exceeding its spontaneous combustion temperature and changing the natural properties with the water vapour present having a protective function.

A natural process, the varying temperatures, varying treatment duration and varying drying techniques require no chemical additives and impart new properties to the treated wood.

Thermal Knotty Pine

Thermal Ash

Thermal Clear Pine

Thermal Fraké

THERMAL

Knotty Pine

Ideal for long term internal and external applications. Available in European Redwood or European Spruce species.

REDWOOD

SPRUCE

Material density:

380-460 kg/m³ (Redwood)
350-430 kg/m³ (Spruce)
(subject to moisture content)

Natural durability class:

Class 3 (Redwood) / Class 3 (Spruce)

Bespoke options:

Available in any required profile

Sizes available

(finished sizes shown):

19mm x 117mm in random lengths
19mm x 140mm in random lengths

Areas of use:

Refurbishment / Domestic /
Commercial

Durability:

Durable (Redwood)
Moderately durable (Spruce)

Sizes shown are finished unless otherwise stated.
Subject to stock availability at the time of order.
Timber cladding, when left in its natural state, will
oxidise and turn a silver grey colour over time,
due to the effects of exposure to sunlight.

THERMAL

Clear Pine

Thermally treated Clear Pine cladding provides a viable knot-free alternative to traditional cedar.

Material density:

450-530 kg/m³

(subject to moisture content)

Natural durability class:

Class 2

Bespoke options:

Available in any required profile

Sizes available

(finished sizes shown):

19mm x 140mm in random lengths

Areas of use:

Refurbishment / Domestic / Commercial

Durability:

Durable

Sizes shown are finished unless otherwise stated. Subject to stock availability at the time of order. Timber cladding, when left in its natural state, will oxidise and turn a silver grey colour over time, due to the effects of exposure to sunlight.

Ash

Perfect for exterior and interior use, thermally treated Ash provides a limitless opportunity for design.

Material density:

550-630 kg/m³

(subject to moisture content)

Natural durability class:

Class 1

Bespoke options:

Available in any required profile

Sizes available

(finished sizes shown):

Offset/shiplap 19mm x 140mm - random lengths

C6: 20mm x 155mm x 2.4 - 3.6m lengths

C6 can be used in conjunction with clip system

Areas of use:

Refurbishment / Domestic / Commercial

Durability:

Very durable

Sizes shown are finished unless otherwise stated. Subject to stock availability at the time of order. Timber cladding, when left in its natural state, will oxidise and turn a silver grey colour over time, due to the effects of exposure to sunlight.

ORCHARD CARE HOME

ArborClad Thermal Clear Pine

The £32 million Richmond Witney Retirement Village was designed by PRC Architecture and built by BAM. The design called for a village atmosphere, with architectural features that reflect the local vernacular.

ArborClad Clear Pine cladding was specified because of its attractive appearance and sustainability benefits, and is incorporated across entire elevations on selected buildings and as a unifying factor on others. As well as supplying the Clear Pine cladding, Howarth Timber machined to profile and finished the corner moulds and fascias, providing a streamlined service.

The thermally modified timber cladding is virtually knot-free, while the non-chemical treatment makes the cladding resistant to moisture and means that it won't warp or swell and will weather evenly to a clean silver-grey colour.

MARKS & SPENCER'S DISTRIBUTION CENTRE

ArborClad Thermal Knotty Pine

Marks and Spencer's multi-million pound northern distribution centre in Bradford, West Yorkshire, has been completed with a facade of high performance thermally treated Knotty Pine cladding.

FLEETWOOD CHANGING HUTS

ArborClad Thermal Fraké cladding

Howarth Timber & Building Supplies helped to create 10 new beach chalets on Fleetwood promenade that share the same construction materials as the area's local observation tower.

The colourful chalets have been constructed using fraké timber, which matches the wood - also supplied by Howarth - used to build the nearby RIBA award winning Rossall Point observation tower, pictured right.

Fraké timber is a premium heat-modified timber species that is gaining popularity in cladding projects due to its durability and ease of use.

The basic rules for installing external cladding

SOFTWOOD

Stainless steel annular ring shank/round head nails are appropriate for fixing softwood cladding:

- The nail length is generally minimum 50mm or 2.5 times the thickness of the board being fixed whichever is the greater and should be punched slightly below the wood's surface.
- Boards over 100mm wide should have double fixings.
- Make sure that butt joints always meet on sufficient batten support width.
- It's preferable to use stainless steel nails for all species but especially those with a high tannin content, and they are essential for timbers installed 'green'. By using Stainless Steel this avoids permanent staining due to the reaction of the tannin on mild steel or galvanised nails.
- If using battens*, we recommend a minimum size of 38x50mm (finished size).

HARDWOOD

Stainless steel screws/annular ring shank nails are the preferred method of fixing for hardwood boards. Stainless steel screws are preferable, and essential for timbers installed 'green':

- Slight over-drilling of the screw holes will allow for any movement in the wood and prevent splits. Countersinking screws is also recommended.
- Where 'green' wood is used, it may be necessary to fit washers to the screws to maintain the fixing security. This can become a design feature.
- Metal clips, which also provide a 'secret fix' effect, may also be considered. Screw fixings should be minimum 40mm or half the width of the board, whichever is the great, from the end of the boards to avoid splitting.
