

# SPANDREL PANELS

**Spandrel Panels are structural timber frame panels made to the profile of the roof, forming the party and/or gable walls, typically supplied as part of a structural roof package. Howarth Timber Engineered Solutions Spandrel Panels are specifically designed and fabricated to complement our range of engineered products and to replace the need for conventional masonry, which is expensive and time consuming to build in-situ.**

The Howarth Timber Engineered Solutions team work closely with our clients to meet any specific project needs and as a result, offer great flexibility in terms of solutions and performance.

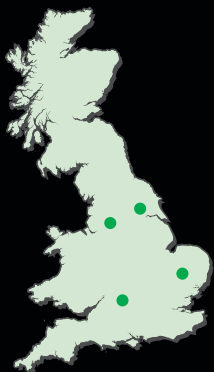

All our roof truss and spandrel products are manufactured to client specifications and conform to the current regulations governing fire and sound.

Howarth Timber Engineered Solutions can provide the appropriate design warranties and we are able to fully certify our supply chain in accordance with recognised industry standards.

All Howarth Timber Engineered Solutions Spandrel Panel packages and associated products are delivered to site at a pre-arranged date. Deliveries will require some form of mechanical off-loading and we can provide guidance on load weights and dimensions where required. Our dedicated planning teams are in constant contact with all of our customers to ensure we have good visibility of your on-site requirements allowing us the opportunity to manage your day to day needs.

- / Offsite manufacture - Saves on-site time.
- / Single trade - Less organisation of different trades.
- / Viable solutions - Suitable for a wide range of roof structures and building types.
- / Performance - Flexibility in terms of performance relating to sound, fire & insulation.
- / Costs Reductions - Reductions in additional scaffolding and labour costs.
- / Improved Speed of Build - No cure time required prior to roof installation.
- / Sustainability - Full chain of custody through PEFC forest certification. (FSC® certification available on a project by project basis)
